GERMAN PRECISION

FOR CANADIAN LIVING

Designed to block extreme temperatures, dampen noise vibrations, channel rainwater, withstand high winds, regulate light, and much more. As a premium manufacturer of windows, EVW has partnered with world-famous REHAU for all vinyl systems, and industry leaders in innovative glass systems.

The look of a fine window, with its design character, lustrous finish and rich colour, draws attention to any home. Your satisfaction with your windows will have a lot to do with how they look right after installation, and how they maintain their appearance through the years.

IT STARTS INSIDE

Energy Efficient

Our uPVC (vinyl) profiles score top marks when compared with aluminum or clad windows, as they have better insulation values and are able to reduce energy and heating costs.

Pressure Equalized Drainage

Engineered to allow moisture to escape quickly and effectively to protect the glass seal.

Steel Reinforced

Ensuring perpetual weather tightness, smooth operation and maintaining strength is why EVW windows are steel reinforced. Sash strength is improved by more than 300% over a non-reinforced sash.

Seamless Corners

For a more attractive outward appearance, shadow-grooved frame and sash corners create a seamless finish.

High Security Locking

Multiple locking points to put your mind at ease and ensure full security protection.

Insulated Glass

Don't just cut your heating and cooling costs, but make your interior surroundings more comfortable. Euro + glass can meet or exceed even the most stringent building codes in any North American climate zone.

Sound Dampening

We keep sound transmissions to a minimum with extra wall thickness, steel reinforcement and multiple interior chambers.

CLEAR LIVING

Two Pane

Two panes including a double LoE coated glass, sealed with a Structural Spacer and filled with Argon.

Three Pane

Three panes of double LoE coated glass on two surfaces, sealed with Structural Spacers and 2 Argon filled chambers.

LoE Coating

Designed to selectively filter the sun's energy in summer and reduce heat loss in winter, this technology improves year-round home comfort while providing energy savings.

Structural Spacer

The backbone of sealed glass, our structural spacer has excellent sealant adhesion, insulating properties as well as structural integrity, creating a long-lasting and strong sealed pane.

Argon Filled

The final insulating property, this high density gas fills the sealed glass cavities to inhibit convection currents within the sealed unit, which in turn reduces heat loss.

WINDOW SYSTEMS

TILT-TURN

Distinguish your home - tilt turn windows are the standard by which all other designs are measured. Whether you want a dramatic wall of windows or a cozy retreat from the outside world, the versatile tilt-turn helps you complete the home of your dreams.

DOUBLE HUNG, SINGLE HUNG & SLIDER

A window for all ages, hung styles have long graced the walls of traditional homes such as Cape Cod, Georgian and Colonial, the simplest, most versatile and economical choice. Sliders are available in single or double operators - providing optimal performance and easy cleaning.

CASEMENT & AWNING

Increasingly popular not only for their simple elegance, but for their superior ventilation, weather tightness and ease of operation.

Peace of mind is invaluable. When you know your windows will stand up to hurricane-force winds while withstanding impact, you have the security and satisfaction of knowing the value of your investment. Believed to be the first vinyl window design to have earned a performance rating in the highest classification defined in the window industry (AAMA 101 "Architectural" Grade 70), the euro casement is the top in its class. It is strong, energy efficient, quiet and durable.

Found deep inside Euro windows and doors is galvanized steel reinforcement which improves the sash strength by more than 300% over non-reinforced.

DOOR SYSTEMS

TILT-TURN DOOR

Built as a single door or as wall of multiple doors, this system offers unparalleled versatility, security and ventilation. Designed for coastal applications due to the multi-point locking hardware with consistent compression on the seals around the perimeter of the sash and frame, these doors are flexible in both function and applications.

SLIDING PATIO DOOR

System 2200 patio door is the modern design of a sliding door. This evolved system accounts for optimum thermal performance and smoother operation, premium security and sound dampening. This is the Safe and Sound door.

THE PERFECT FINISH

Your selection of solid coloured white or beige can be combined with post-application finishes in a Renolit foil for a textured look or industrial grade paint for a flawless finish. Trust these enduring finishes to ensure your project design makes a lasting impression. See our Euro Finishes cards to explore colours and find fresh inspiration.

CUSTOM MADE

We are a 'Just in Time' manufacturer, meaning that we only produce windows and doors ordered by our retail partners. Every Euro window and door is made by hand at our manufacturing facility in Woodbridge, Ontario, and then put through our strict quality control to ensure every Euro product that leaves our factory meets our high quality standards. This process allows us to produce a wide variety of window and door options and features made exclusively for your home. From the latest finishing features to traditional finishes, we will ensure our craftsmanship will improve the way your home looks and feels.
